

## Introduction

---

This guide will help you verify the Mobile Mech is installed correctly. You will be able to verify functionality of the device.

## Pre-Installation Requirements

---

Before beginning the installation, ensure that the following requirements are met:

### AC Location Activation

---

The game machine asset and MobileMech device must be assigned to an available location name under your organization in the Amusement Connect Operator Dashboard. Complete the [Location Setup Request Form](#) if a new location needs to be created.

### Game Machine Asset Setup

---

To properly function after installation, the powered MobileMech device must be assigned to an active Game Machine Asset within the Operator Dashboard. To create a new Game Machine Asset, follow the Quick Start Guide process.

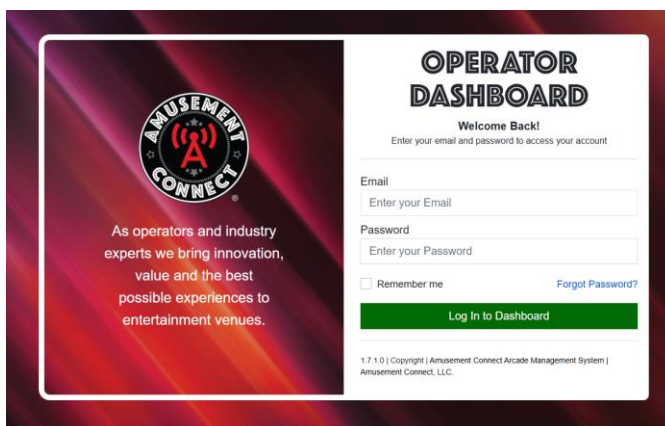

### Connectivity

---

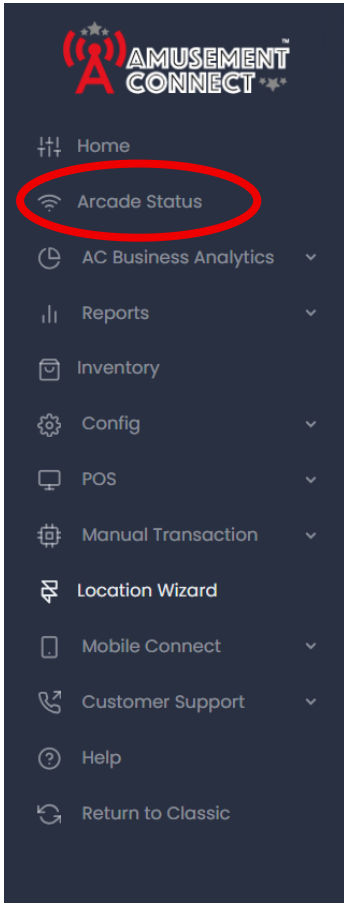

Wi-Fi configuration requires access to the router SSID and password. A 2.4 GHZ network is required to connect the MobileMech device to Wi-Fi.

## Post Install Testing

---

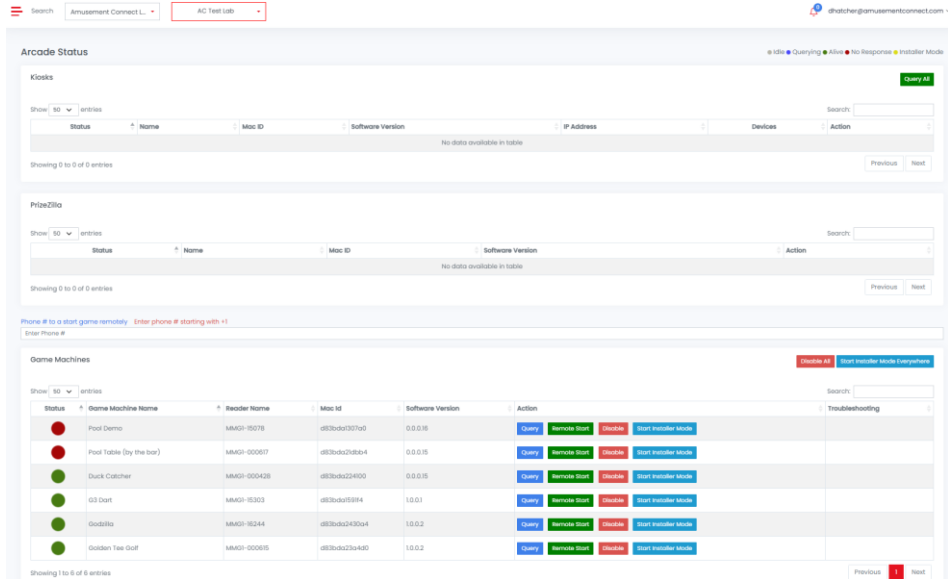

1) Navigate to <https://app.amusementconnect.com/> & log in.

2) Click Arcade Status

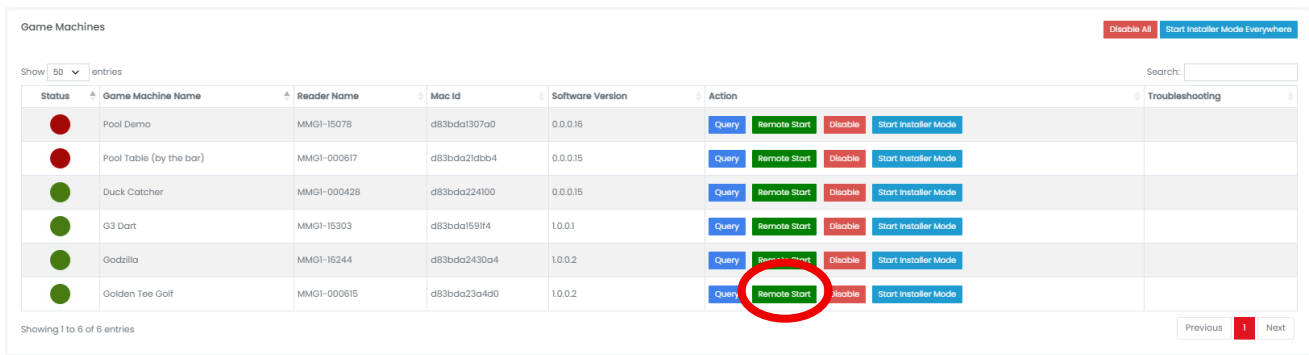

3) Using the drop-down menu, select the location you are working with.

4) Here we can see our list of games. The games that are GREEN are ONLINE and connected.

The two that are RED are OFFLINE and not connected.

RED = OFFLINE  
GREEN=ONLINE

5) On this screen we can also send a coin-up to the game machine. To do this, click on **Remote Start**. This coin test does not affect reporting data. It is only for testing the coin-up functionality of the game machine. When we click this tab, we should look for the game machine to coin-up. We should also see the LED on the MobileMech flash.
